DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 2, 3 & 11, drawn to a capacitive test, classified in class 340, subclass 562.
 - II. Claim 4, drawn to spacing detection, classified in class 340, subclass 686.6.
 - III. Claims 5-6 & 12-19, drawn to the combination of a single-use component and a capacitance, classified in class 337, subclass 239.
 - IV. Claim 7, drawn to a user interface, classified in class 345, subclass 700.
 - V. Claims 8 & 9, drawn to an override switch, classified in class 83, subclassDig. 1.
 - VI. Claim 10, drawn to detecting movement of a cutting tool, classified in class 340, subclass 671.
 - VII. Claims 22, 24 & 28, drawn to continuous testing beyond initialization, classified in class 340, subclass 529.
 - VIII. Claims 25-27, drawn to a method of controlling a saw, classified in class 83, subclass 13.

Claims 1, 20, 21, 23 & 28 are common to groups I-VII, and will be examined if any of groups I-VII are elected.

The inventions are distinct, each from the other because of the following reasons:

Application/Control Number: 09/929,237 Page 3

Art Unit: 3724

2. Inventions VIII and I-VII are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatuses as claimed can be used to practice another and materially different process, such as one that does not involve the checking of the detection system for functioning.

- 3. Inventions I-VII are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. For example, invention I has separate utility from invention II such as the detection of capacitance of a capacitor in a brake assembly without the need to know the spacing between the blade and the brake mechanism, and conversely, invention II has separate utility from invention I since the detection of the spacing between the blade and the brake mechanism does not require a capacitor in the brake mechanism to function. The remaining groups are similarly distinct from one another as they do not require one another to function. See MPEP § 806.05(d).
- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 3724

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be

traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected

invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by

a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
